

+ nice examples
+ very good materials

- too few breaks
and too much
talking

+ good explanations
- some delay in getting feedback

Really happy
to have learned
and understood
the basics like
cliff for commit
and add
and how commit
create history

+ under the hood
- bad coffee

It Covered a lot of
content. Found it very
useful.

I liked that the concepts
and terminology were
explained. I had previously
used git "on the go"
and being self-taught

Tools working on mac
could be listed

The material is
great

Pace was a bit
slow, maybe
more optional
tasks?

Like: Basics of using
git

Improve: Conflict reso-
lution needs more
time, examples.

I liked the thorough
lecture on branches
in Git. (+)

I would have (-)
enjoyed a more
in-depth view of
online git repos.

+ very good
material & calm
style of teaching

- it's quite an
amount of commands
in the beginning
to remember

+ Nice resources
online, help in
following the lesson
and staying
focused.

- Examples that
were not in the
resources were
sometimes too
fast

+ Examples and descriptions
clear and sufficient

- The beginning of the session
was fast (specially for me
as a beginner)
too

Git

- like: practical exam-
-ples
- to improve:
nothing to
improve.

I Liked

- Branching
- Aliases

+ - I didn't use
branches much
before so that
part was the most
useful

- no cookies :)

Useful! very good
overview! Although
Bash-skills were
ruled it was easy
to catch up!

Git

+ good set of topics and a great, simple enough running example

- a summary recap at the end would be good too

+ I learned about conflict solving

! I need to learn
° rebasing!

AMAZING COURSE
well-structured

Kindly Record
lectures and
put youtube
videos

"+": Good examples, which help you to try out different features of Git

"-": Probably due to the time limits/schedule, sometimes it felt a bit abrupt, i.e. there was a quick jump from one topic to

• VERY CLEAR AND COMPLETE TRIP THROUGH GIT

• EXPLOR FURTHER THE INTEGRATION OF GIT WITH IDEs.

I liked hands-on exercises and experiments

To improve: dunno

* The pace at which Richard explained Git concepts and synchronization between instructions and online resource + commands was perfect. ~~Great~~ Thanks.

* Maybe the second half of the day was a bit quicker.?

Like: Clear overview of git basics

Improve: Make it more interactive, e.g., have 2 teams editing the same project on GitHub.
