(git session was too
basic for me.
How to enforce a style
check before a git comment?)

Modular code session
was excellent!

+: lots of examples,
very nice presentation

-:

moduler code

+ useful stuff as a
whole

- some more concrete
examples to
illustrate ~~the~~
impure/pure code
(slide 9/25)

Collaboration tasks
were nice

Examples could
have been a bit
more hands on

+ important points

* language specific
group discussions

- I'd like to learn
how to handle
long pipelines, possibly
with different prog
languages

+ The topic is important

- I didn't get much
from the group
work

- Clear EXPLANATIONS

- MORE PRACTICAL
EXAMPLES

+ useful topic from an
approachable angle

- more hands-on
examples

· The content was very interesting, specially the given tips (like the "3-rule"

Nice concrete tips and highlighting issues

Group task was a bit confusing

15-17 session was ~~too~~ too slow

but nice and well-understandable

Session on module progr: too general, few concrete methods

+ idea
– implementation

+ interesting, nice teaching

– discussions
